

COMP486A2 Test

by Mui,Dixon iD : 3677188

My development environment is Vs code and I used an extension called live server for quick local server , but my game can run by clicking the index.html directly. For the testing , I suggest testers to do manual testing form the start of the game to the end of the game.

test items	inputs	expected outputs	actual outputs	results/remarks
Game initialization	Click the start button in the menu	should move to game screen and player can start playing.		
keyboard input	keyboard button input	When a player presses the corresponding key , they should move at the right direction. D as forward, W as left, S as right and A as backward .		
bomb spawning	Track the bomb spawning progress.	Around 0-9 bombs can spawn. And by time the spawn rate should increase.		
bomb speed	Track the movement speed of the bomb	bomb should move from right to left . And by time, the speed of it should increase.		
ground movement	Track if the ground animation is correct	It should move from right to left , and increase the speed by time, when the goal is reached , it should stop moving .		
HP	Track the HP at the left bottom corner , those green squares.	The initial number of the HP should be 3 , every time the player hits a bomb , 1 green box will be removed .		
Goal spawning	Track if current meter is equal to goal meter	If players reach the goal meter , a door on the right side should spawn.		
player movement boundary	Track the player movement range.	The player can not surpass the left wall , the right limit when the goal is not reached , the right wall when the goal is reached , the upper wall and the bottom wall.		
bomb removal	Track when bomb hit the player.	bomb should be removed if it hits the player.		

Invincibility	track the player when it hits a bomb	Player should have the Invincibility effect , it will keep flashing white light during the period. They cannot hit any bomb in that duration.		
Win and lose	track player HP and x location	If player HP(green box at the left bottom) reach 0 or player touched the left wall, it should show a lost ending and message . If player reach the goal and touch the door , it should show a win ending and message.		
setting button	Click the setting button during the game	It should bring the player to the setting menu and pause the game.		
resume button	Click the resume button in the setting screen.	It should bring the player back to the game screen and un pause the game.		
guide button	Click the guide button in the setting screen.	It should bring the player to the guide screen teaching players how to win and play the game.		
Go back button	Click the go back button in the guide screen	It should go back to setting screen.		
Back to menu button in setting screen	Click the button in the setting screen.	It should go back to the main menu screen.		
Back to menu button in ending screen	Click the button in the ending screen	It should go back to the main menu screen.
